

Baggage Calculator Online is the simple solution that will keep pace with additional, complicated regulatory changes while presenting the information you need at any moment.

CASE 1 Data Coding Validation

Testing policies before they are sent to the entire industry ensures that you are putting truly competitive and correct baggage data into the market that follows your current policies.

CASE 2 Validating Interline Policies

Knowing all interline and alliance partner airlines means you always have the correct baggage policy so there's no confusion—for airlines or passengers.

CASE 3 Analyzing Competitive Policies

Analyzing competitive baggage policies creates better opportunities for revenue goals and customer satisfaction.

Analysts need to have the most accurate and real-time information.

CASE 4 Auditing Debit Memos

Quickly auditing baggage policies helps you reduce debit memos that come from interlining to safeguard against incorrect debits.

BAGGAGE CALCULATOR INTEGRATED

KEY USE CASES

AIRPORT RESERVATIONS AND CHECK-IN KIOSKS

Having accurate information at your fingertips is important not only to airline reservations, but to customers checking in themselves.

Solution

A potential customer rushes to your airline's reservation counter for the first flight out to New York.

1. Before, your ticketing agent would have to look in an outdated book or know off the top of her head what baggage is allowed and its cost for the specific itinerary.
2. With Baggage Calculator Integrated, your ticketing agent now can book a flight and know precisely what the itinerary allows based on market and regulations.

Your passenger decides to check in at the kiosk for his flight. Baggage Calculator Integrated relays all possible baggage policy information to him quickly and accurately.

Result

Airlines create more efficient and painless environments for airport reservations and passenger check-ins, leaving your airline teams stress-free and your passengers pleased.

BETTER ONLINE RESERVATION CHANNELS

With online reservations quickly overtaking more traditional routes of booking, you must integrate your baggage policies with all your reservation systems so you can stay competitive and realize full revenues.

If your potential passengers aren't informed of correct baggage policies, they're left confused and frustrated while you're left without a loyal customer.

Solution

- A customer goes to your website to directly book tickets from LAX to DFW.
- Once she selects the fare she wants, her optional services selection pops up.
- Baggage Calculator Integrated immediately calculates what baggage allowance and charges she has with her specific fare.

Result

With Baggage Calculator Integrated, the airline or online travel agency can seamlessly link baggage policies based on itineraries to reservations, creating ease and clarity for passengers booking online.
